## **Amendments To The Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

## Listing of claims:

- 1. (Currently amended) An optical data recording medium comprising a transparent substrate, a thin film layer formed on the transparent substrate and a protective film which is mainly comprised of a resin and formed on the thin film layer for protecting the thin film layer, wherein the thin film layer is a single layered or multilayered film including at least any one of a dielectric film, a recording film and a reflective film, and an expansion coefficient under humidity [ratio of expansion (1/%) where a difference of relative humidity (vapor content/saturated vapor amount at  $25^{\circ}$ C) is increased by 1%] of the protective film is greater than that of the transparent substrate and smaller than  $5.5 \times 10^{-5} \frac{1.7 \times 10^{-4}}{1.0}$  and the thickness of the protective film is  $5 \mu m$  to  $20 \mu m$ .
  - 2. (Cancelled).
  - 3. (Cancelled).
  - 4. (Cancelled).
- 5. (Previously Presented) An optical data recording medium according to claim 1, wherein the transparent substrate is made of a polycarbonate or a polyolefin and a thickness thereof is about 0.5 mm.
- 6. (Previously Presented) An optical data recording medium according to claim 1, wherein the protective film is made of an ultraviolet light curing resin.
  - 7. (Cancelled).

- 8. (Cancelled).
- 9. (Cancelled).
- 10. (Currently amended) An optical data recording medium comprising a transparent substrate, a thin film layer formed on the transparent substrate and a protective film which is mainly comprised of a resin and formed on the thin film layer for protecting the thin film layer, wherein the thin film layer is a single layered or multilayered film including at least any one of a dielectric film, a recoding film and a reflective film, and an expansion coefficient under humidity {ratio of expansion (1/%) where a difference of relative humidity (vapor content/saturated vapor amount at  $25^{\circ}$ C) is increased by 1%} of the protective film is greater than that of the transparent substrate and smaller than  $5.5 \times 10^{-5} \frac{1.7 \times 10^{-4}}{1/\%}$ , and a Young's modulus of the protective film is greater than  $2.0 \times 10^{-9}$  (Pa) and smaller than  $1.0 \times 10^{-10}$  (Pa), and the thickness of the protective film is  $5 \mu m$  to  $20 \mu m$ .
- 11. (Currently amended) An optical data recording medium according to claim 1, wherein the expansion coefficient under humidity of the protective film is 7 or less times as great as that of the transparent substrate, the expansion coefficient under humidity being greater than  $7 \times 10^{-6}$  (1/%) and smaller than [[5 ×-5]]  $5 \times 10^{-5}$  (1/%), and a Young's modulus of the protective film is greater than  $2.0 \times 10^{9}$  (Pa) and smaller than  $1.0 \times 10^{10}$  (Pa).
- 12. (New) An optical data recording medium comprising a transparent substrate, a thin film layer formed on the transparent substrate and a protective film which is mainly comprised of a resin and formed on the thin film layer for protecting the thin film layer,

wherein the thin film layer is a single layered or multilayered film including at least any one of a dielectric film, a recording film and a reflective film, and

wherein an expansion coefficient under humidity, Young's modulus and thickness of the protective film are suitably adjusted so that the bending moments of . Amendment and Response N. Takamori, *et al.* U.S.S.N. 10/002,952 Page 4 of 17

the transparent substrate and the protective film generated by change in humidity are balanced with a neutral plane being a plane perpendicular to the film thickness direction and the position of the neutral plane is arranged within the thin film layer.

- 13. (New) An optical data recording medium according to claim 1, wherein the expansion coefficient under humidity of the protective film is greater than that of the transparent substrate and smaller than  $1.6 \times 10^{-5}$  (1/%).
- 14. (New) An optical data recording medium consisting essentially of a transparent substrate, a thin film layer formed on the transparent substrate and a protective film which is mainly comprised of a resin and formed on the thin film layer for protecting the thin film layer, wherein the thin film layer is a single layered or multilayered film including at least any one of a dielectric film, a recording film and a reflective film, and an expansion coefficient under humidity [ratio of expansion (1/%) where a difference of relative humidity (vapor content/saturated vapor amount at  $25^{\circ}$ C) is increased by 1%] of the protective film is greater than that of the transparent substrate and smaller than  $5.5 \times 10^{-5}$  (1/%) and the thickness of the protective film is 5  $\mu$ m to 20  $\mu$ m.
